Deskripsi:

Project ini adalah solusi scraping fleksibel yang dapat menerima input berupa bahasa natural. Misalnya: *"Tolong scrape plumber di New York"*. AI Agent akan memproses input dan memilih workflow scraping yang sesuai (contohnya Google Maps). Data hasil scraping kemudian disimpan otomatis ke Google Sheets atau diekspor ke Excel. Informasi yang terkumpul meliputi nama bisnis, layanan, nomor telepon, kota, dan URL.

Tools & Teknologi: n8n, AI Agent (Gemini), Apify Google Maps API, Google Sheets.

Kontribusi Saya: Mendesain workflow AI Agent agar memahami bahasa natural, menghubungkan n8n dengan Apify, serta memformat output agar siap dipakai tim.

Hasil / Output: Workflow mampu scraping ratusan data bisnis hanya dengan satu input sederhana, mempercepat riset pasar dan database prospek.

Catatan Keberlanjutan: Bisa diperluas ke sumber lain (Yellow Pages, TikTok, Instagram, Apollo).
